

## Solar O&M provider ensibo presents new headquarters and relaunches corporate website

**Hamburg, 04.05.2015** – ensibo GmbH has relocated its headquarters. The independent service provider for Operations & Maintenance of solar power plants moved to new premises in the course of its further expansion. At the same time, the relaunch of the corporate website was carried out: From now on, at [www.ensibo.de](http://www.ensibo.de) the company informs bilingually about its service portfolio and current developments.

### More space for further expansion

As business volume increases, ensibo needs more space for the growing team and the equipment. „Our new office in Friesenweg 5 in Hamburg Bahrenfeld offers convenient transport connections, an exciting environment and sufficient space to cater for the company’s further growth“, described ensibo’s Managing Director Ulrich von Borstel the motivation to move office. „Of course we remain available under the known telephone and fax numbers at our new headquarters“.

### New corporate website online

ensibo’s completely redesigned website was launched recently. At [www.ensibo.de](http://www.ensibo.de), interested individuals, customers and partners get valuable insight into the O&M service portfolio for solar farms and photovoltaic rooftop systems offered by the independent solar service provider in German and English language. „We are very proud of our new homepage, its contents will be continuously updated“, explained Jan Gäde, Managing Director of ensibo. „The responsive layout allows for optimal presentation of our company on desktop monitors, laptops and mobile devices.“ The English language version was implemented in reaction to the increasing demand from abroad.

### About ensibo

ensibo is the independent service provider for Operations & Maintenance of solar power plants. Whether continuous remote monitoring, corrective maintenance, preventive maintenance or reporting: The technical management of solar farms and large photovoltaic rooftop systems is the passion and profession of our team. ensibo stands for a lean organization, consistent service adaptation to customer needs and one of the most extensive and at once efficient service programs for solar power plants. With the specifically for ensibo developed monitoring software solMan, the experienced team monitors solar power plants of any size and independent from installed components. The ensibo GmbH was founded in January, 2011, is based in Hamburg (Germany) and operates solar power plants on both national and international level.
